

# Green Line Transformation

## Construction Project Updates

## Week in Review and Lookahead

Friday, April 8, 2022

This week we advanced the testing and development of the [Green Line Train Protection System](#), with new equipment continuing to be manufactured

### Green Line Train Protection System (GLTPS)

**Green Line Train Protection System:** Combines vehicle and wayside equipment to avoid train-on-train collisions, add red-light signal protection, and incorporate speed enforcement

- ✓ **This Week** | Crews inspected new GLTPS equipment at the manufacturing facility, and used the Riverside test track to generate data to make adjustments to the software
- **Lookahead** | New equipment inspections will be ongoing at the manufacturing facility, and GLT crews will work to help prepare the Green Line Extension Vehicle Maintenance Facility for future vehicle equipment installation
