

# SAFETY FIRST

## ON SOUTH COAST RAIL

### STOP TRUCK AND DELIVERY TRAGEDIES

#### SEE TRACKS? THINK TRAIN

MBTA's South Coast Rail (SCR) will restore Commuter Rail service to southeastern MA in spring 2025. Until that time, the MBTA is testing trains to meet federally mandated safety requirements. Trains will reach the approved maximum speed of 79 mph in many areas shown on the map.

We are alerting Delivery and Commercial Drivers to best practices in the area. Trains and grade crossings have not been in active use for nearly 65 years. You may not be aware of the new commuter rail service. Don't be a risk taker - you can avoid truck or van tragedies by knowing the facts.

#### Consider these facts:

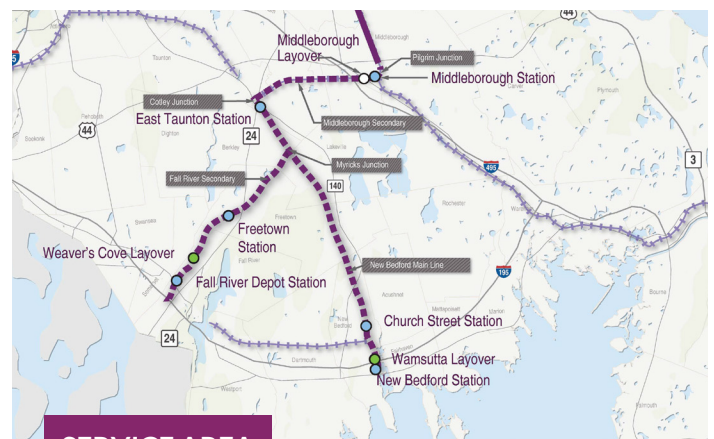

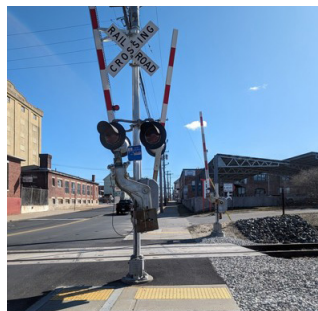

- 1 Know your route and be aware of where railroad crossings are
- 2 Always expect a train and know that trains can run at any time, on any track in either direction
- 3 Never try to beat at train. Cross legally and safely

Check out more safety resources in the [Professional Drivers Brochure](#) and put Safety First. Stay Safe.

**As MBTA trains continue to travel through the region, we'll be putting your Safety First. Join us in practicing safety in your community.**

**YOU ARE MORE IMPORTANT THAN YOUR PACKAGES OR DELIVERY**
